

What you'll need:

- Cocoa powder
- White index card (unlined)
- Clear tape
- Small paintbrush

Directions:

1. For the best results, find the smoothest, flattest surface on the item or area you want to test for prints.
2. Sprinkle the cocoa powder onto the surface where the fingerprint is.
3. Using the small paintbrush, gently brush the powder to make the print appear.
4. Place clear tape directly over the fingerprint.
5. To lift the print, gently peel up the tape, and then press it firmly onto the white card to transfer.
